Project Milestones

Milestone	Version	Date	Remarks
<i>Milestone 1</i> – ERD & Relational Schema	V1.0	26/04/2026	

1. Entity-Relationship Diagram (ERD)

Entity-Relationship Diagram – Trading Journal & Performance Analysis System

2. Relational Database Schema

This section presents the relational schema derived from the ERD. Each entity is converted into a table with clearly defined Primary Keys (PK) and Foreign Keys (FK) to ensure data integrity and relationships.

2.1 USERS

Description: Stores system users (traders).

USERS(UserID PK, Name, Email, Password, CreatedAt)

2.2 STRATEGIES

Description: Stores different trading strategies used by traders.

STRATEGIES(StrategyID PK, StrategyName, Description)

2.3 ASSETS

Description: Stores tradable assets such as Forex pairs, cryptocurrencies, or stocks.

ASSETS(AssetID PK, AssetName, MarketType)

2.4 TRADE_TYPES

Description: Defines type of trade (Buy/Sell).

TRADE_TYPES(TypeID PK, TypeName)

2.5 TRADES

Description: Stores all trading activity performed by users.

TRADES(
TradeID PK,
UserID FK -> USERS(UserID),

```
StrategyID FK -> STRATEGIES(StrategyID),
AssetID FK -> ASSETS(AssetID),
TypeID FK -> TRADE_TYPES(TypeID),
EntryPrice,
ExitPrice,
Quantity,
ProfitLoss,
TradeDate
)
```

2.6 JOURNAL_NOTES

Description: Stores user reflections, emotions, and notes for each trade.

```
JOURNAL_NOTES(
  NoteID PK,
  TradeID FK -> TRADES(TradeID),
  NoteText,
  Emotion
)
```
